

# Ariston NET GPRS Module

A dedicated connectivity route  
for supported heat pump systems.

**GPRS GATEWAY**

**FOR ARISTON NET CONNECTIVITY**

## When Wi-Fi is the weak link

The Ariston NET GPRS kit helps connect compatible Ariston heat pump systems to Ariston NET using a gateway with a dedicated data SIM. It is a practical accessory when customer Wi-Fi cannot be relied on for connected control and support.

# Simple handover for heat pump projects

The GPRS module is not another controller to sell around. It is the communications route for Ariston NET, used with the correct Ariston control package and compatible heat pump system.

## Specify

Confirm the selected heat pump and controls support the Ariston NET GPRS route.

## Install

Fit the gateway and Sensys/control package in line with Ariston instructions.

## Activate

Register and activate Ariston NET with the homeowner at handover.

## Best fit

Use the GPRS route where the homeowner wants Ariston NET features but the installation should not depend on a stable 2.4 GHz Wi-Fi network, or where future support needs a clearer connectivity baseline.

## Customer handover note

Explain that signal coverage, service activation and compatibility determine which remote functions are available.

## Supplied and supported by Thermal Earth

Thermal Earth Ltd, Capel Hendre Industrial Estate, Ammanford,  
Carmarthenshire, SA18 3SJ, Wales
